American Society of Civil Engineers

Seismic Design Criteria for Structures, Systems, and Components in Nuclear Facilities

This document uses both the International System of Units (SI) and customary units.

Developed by
Working Group for Seismic Design Criteria for Nuclear Facilities
Dynamic Analysis of Nuclear Structures Subcommittee
Nuclear Standards Committee

## Standard

1.0 Introduction  
   1.1 Overview of the Seismic Design Criteria  
   1.2 Use of ASCE Standard 43-05 with Other Codes and Standards  
   1.3 Alternative Methods to Meet Intent of this Standard

2.0 Earthquake Ground Motion  
   2.1 Seismic Hazard Evaluation  
   2.2 Development of DBE Ground Motion  
      2.2.1 Horizontal Ground Motion  
      2.2.2 Vertical Ground Motion  
   2.3 Method to Define the Design Response Spectra at Various Depths in the Site Profile  
   2.4 Criteria for Developing Synthetic or Modified Recorded Time Histories

3.0 Evaluation of Seismic Demand  
   3.1 Introduction  
   3.2 Linear Analysis  
      3.2.1 Linear Equivalent-Static Analysis  
      3.2.2 Linear Dynamic Analysis  
   3.3 Nonlinear Analysis  
      3.3.1 Nonlinear Static Analysis  
      3.3.2 Nonlinear Dynamic Analysis  
   3.4 Modeling and Input Parameters  
      3.4.1 Effective Stiffness of Reinforced Concrete Members  
      3.4.2 Mass  
      3.4.3 Damping Values for SSCs

4.0 Evaluation of Structural Capacity  
   4.1 Structural Systems  
      4.1.1 Definitions  
      4.1.2 Acceptable Structural Systems for Nuclear Facilities  
      4.1.3 Prohibited Structural Systems

4.2 Structural Capacities
   4.2.1 General
   4.2.2 Reinforced Concrete
   4.2.3 Capacity of Low-Rise Concrete Shear Walls
   4.2.4 Structural Steel
   4.2.5 Reinforced Masonry

4.3 Deformation and Rotation Capacities

5.0 Load Combinations and Acceptance Criteria for Structures
   5.1 Load Combinations
      5.1.1 General
      5.1.2 Seismic Loading Combinations
   5.2 Acceptance Criteria
      5.2.1 General
      5.2.2 Strength Acceptance Criteria
      5.2.3 Deformation Acceptance Criteria

6.0 Ductile Detailing Requirements
   6.1 Steel Structures
      6.1.1 Moment Frames
      6.1.2 Braced Frames
   6.2 Reinforced Concrete
      6.2.1 General
      6.2.2 Slab/Wall Moment Frame Systems
   6.3 Anchorage

7.0 Special Considerations
   7.1 Rocking and Sliding of Unanchored Rigid Bodies
   7.2 Building Sliding and Overturning
      7.2.1 Building Sliding
      7.2.2 Building Overturning
   7.3 Seismic Separation
   7.4 Seismic Design Considerations for Foundation Elements
      7.4.1 Linear Analyses
      7.4.2 Nonlinear Analyses
      7.4.3 Special Provisions for Foundation Components
      7.4.4 Liquefaction Potential and Soil Strength Loss
   7.5 Unreinforced Masonry Used as Movable Partitions, Barriers, and Radiation Shielding
   7.6 Provisions for Construction Effects
8.0 Equipment and Distribution Systems
  8.1 Introduction
  8.2 Qualification by Analysis
    8.2.1 Seismic Analysis Methods
    8.2.2 Demand for Qualification by Analysis
    8.2.3 Capacity Using Qualification by Analysis
    8.2.4 Acceptance Criteria and Documentation for Qualification by Analysis
  8.3 Qualification by Testing and Experience Data
    8.3.1 Tests and Experience Methods
    8.3.2 Demand for Qualification by Tests and Experience Data
    8.3.3 Capacity Defined for Seismic Qualification by Test and Experience Data
    8.3.4 Acceptance Criteria and Documentation for Qualification by Tests and Experience Data

9.0 Seismic Quality Provisions
  9.1 Design Verification and Independent Peer Review
    9.1.1 Seismic Design Verification
    9.1.2 Independent Seismic Peer Review
  9.2 Structural Observation, Inspection, and Testing
    9.2.1 Structural Observations
    9.2.2 Continuous and Periodic Inspections
    9.2.3 Testing
  9.3 Quality Assurance
    9.3.1 Design Basis Documents
    9.3.2 Design Procedures

Appendix A
A.0 Approximate Methods for Sliding and Rocking of an Unanchored Rigid Body
  A.1 Approximate Method for Sliding of an Unanchored Rigid Body
  A.2 Approximate Method for Rocking of an Unanchored Rigid Body

Appendix B
B.0 Commentary on and Examples of Approximate Methods for Sliding and Rocking of an Unanchored Rigid Body
  B.1 Approximate Method for Sliding of Unanchored Rigid Body
  B.2 Approximate Method for Rocking of Unanchored Rigid Body
  B.3 Example Problems: Rigid Body Rocking and Sliding
    B.3.1 Rigid Body Rocking Example
    B.3.2 Rigid Body Sliding Example

Commentary
C1.0 Introduction
C1.1 Overview of the Seismic Design Criteria
C1.2 Use of ASCE Standard 43-05 with Other Codes and Standards
C1.3 Alternative Methods to Meet Intent of this Standard
   C1.3.1 References for Section C1.0

C2.0 Earthquake Ground Motion
   C2.2 Development of Design Basis Earthquake Ground Motion
      C2.2.1 Horizontal Ground Motions
      C2.2.2 Vertical Ground Motions
   C2.3 Method to Define the Design Response Spectra at Various Depths in the Site Profile
   C2.4 Criteria for Developing Synthetic or Modified Recorded Time Histories
      References for Section C2.0

C3.0 Evaluation of Seismic Demand
   C3.3 Nonlinear Analysis
   C3.4 Modeling and Input Parameters
      C3.4.1 Effective Stiffness of Reinforced Concrete Members
      C3.4.3 Damping Values for SSCs
      References for Section C3.0

C4.0 Evaluation of Structural Capacity
   C4.2 Structural Capacities
      C4.2.3 Capacity of Low-Rise Concrete Shear Walls
      References for Section C4.0

C5.0 Load Combinations and Acceptance Criteria for Structures
   C5.1 Load Combinations
      C5.1.1 General
   C5.2 Acceptance Criteria
      References for Section C5.0

C6.0 Ductile Detailing Requirements
   C6.2.2 Slab/Wall Moment Frame Systems

C7.0 Special Considerations
   C7.1 Rocking and Sliding of Unanchored Rigid Bodies
   C7.2 Building Sliding and Overturning
   C7.3 Seismic Separation
   C7.5 Unreinforced Masonry Used as Movable Partitions, Barriers, and Radiation Shielding
   C7.6 Provisions for Construction Effects
      References for Section C7.0

References for Section C1.0
References for Section C2.0
References for Section C3.0
References for Section C4.0
References for Section C5.0
References for Section C6.0
References for Section C7.0
C8.0  Equipment and Distribution Systems

References for Section C8.0

C9.0  Seismic Quality Provisions

  C9.1  Design Verification and Independent Peer Review
  C9.2  Structural Observation, Inspection, and Testing
  C9.3  Quality Assurance

References for Section C9.0
