Contents

Elastic and Small Strain Behavior

Small Strain Responses of a Freshwater Glacial Clay .............................................................. 1
Richard J. Finno, Terence P. Holman, Young-Hoon Jung, Wan Jei Cho,
and Izzat Katkhuda

High Capacity Hollow Cylinder Apparatus with Local Strain Measurements ............ 16
L. I. N. De Silva, J. Koseki, T. Sato, and L. Wang

Geophysical Determination of Cross Anisotropic Stiffness Properties of Soils .......... 29
Dennis R. Hiltunen, Yoonseok Choi, and Leslie M. Griffin

Anisotropic Stress-Strain Behavior at Small Strains of Clay by Triaxial and Bender
Element Tests ......................................................................................................................... 44
Satoshi Yamashita, Tomohito Hori, and Teruyuki Suzuki

Small Strain Shear Moduli of Lime-Cement Treated Expansive Clays ......................... 58
Anand J. Puppala, Venkat Bhadriraju, Raja Sekhar Madhyannapu,
Soheil Nazarian, and Richard Willammee

Highly Non-Linear Stress-Strain Behavior and Strength

3-D Coulomb’s Failure Criterion for Various Geomaterials ................................................. 71
Mitsutoshi Yoshimine

Drained and Undrained Strengths of Sand in Axisymmetric Tests at High
Pressures .................................................................................................................................. 87
Poul V. Lade, Jerry A. Yamamuro, and Paul A. Bopp

Elasto-Plastic Constitutive Model for Bonded Sand over a Wide Stress Region......... 103
Yukio Nakata, Daisuke Katsuki, Masayuki Hyodo, and Hidekazu Murata

Numerical Methods and Probabilistic Analysis

The Influence of Strength Variability in the Analysis of Slope Failure Risk............... 113
D. V. Griffiths, Gordon A. Fenton, and Heidi R. Ziemann

A Multi-Phase Coupled FE Analysis Using an Elasto-Viscoplastic Model for
Unsaturated Soil ..................................................................................................................... 124
Fusao Oka, Takeshi Kodaka, Sayuri Kimoto, YoungSeok Kim,
and Nobuhiro Yamasaki

The Influence of Uncertain Material Parameters on Stress-Strain Response ............. 132
Boris Jeremić and Kallol Sett

Feng Zhang, Atsushi Yashima, Guan Lin Ye, Hla. Aung, Kiyokazu Naitou,
and Teruo Nakai
Geomechanics II

Compaction, Collapse and Frost Heave

A Semi-Empirical Relationship for Predicting Soil Collapsibility under Soaking........ 162
Noriyuki Yasufuku, Hidetoshi Ochiai, and Dolrerdee Hormdee

Modeling and Simulation of Frost Heave Using Porosity Rate Function ............... 178
Radoslaw L. Michalowski and Ming Zhu

Densification of Dewatered Sludge by Compaction after Crushing and Air-Mixing ......................................................... 189
Masaki Nakano, Kentaro Nakai, and Kazuhiro Kaneda

Effects of Strain Rate, Aging, and Viscous Effects on Stress-Strain Behavior

A Super/Subloading Yield Surface Approach to Compaction/Liquefaction of Sand and Secondary Consolidation of Clay................................................................. 201
Akira Asaoka, Masaki Nakano, and Toshihiro Noda

Towards an Improved Anisotropic, Time-Dependent Model for Cohesive Soils....... 219
Victor N. Kaliakin

Numerical Assessment for Long-Term Settlement of the Reclaimed Pleistocene Deposits .................................................................................................................. 243
Mamoru Mimura and WooYoung Jang

Constitutive Modeling of Chalk Time-Dependent Behavior and Chalk-Water Interaction............................................................................................................. 269
Marte S. Gutierrez and Randall J. Hickman

Viscous Property of Geomaterial in Drained Shear................................................. 285
Fumio Tatsuoka, Tadao Enomoto, and Takashi Kiyota

Numerical Methods for Plasticity and Viscoplasticity of Geomaterials ...................... 313
Tadatsugu Tanaka

Mechanics of Shear Banding

Observation of Strain Localization of Porous Tuff Using Image Analysis and X-Ray CT.................................................. 328
Takeshi Kodaka, Fusao Oka, Jun Otani, Hideki Kitahara, and Masayuki Imai

Grain Scale Processes Associated with Shear Banding in Sands ............................. 342
Amy L. Rechenmacher

Liquefaction of Soils

Liquefaction Strength of Sands Containing Fines Compared with Cone Resistance in Triaxial Specimens ......................................................... 356
Takeji Kokusho, Tadashi Hara, and Keita Murahata

Mechanics of Instability of Sand at High Pressures................................................. 374
Jerry A. Yamamuro and Poul V. Lade
Geomechanics II

**Boundary Value Problems**

Physical and Numerical Modeling of Long-Term Load on a Tunnel in Soft Clay .......... 390
Osamu Kusakabe and Takeru Ariizumi

3D Effects in Excavation Problems: Model Tests and Numerical Simulations............. 407
Teruo Nakai, Hossain Md. Shahin, Naoyuki Iwata, Eunsu Sung, and Masaya Hinokio

Analysis of the Axial Response of Non-Displacement Piles in Sand ......................... 427
Rodrigo Salgado

Performance of Five Embankments on Soft Clay Foundation ................................ 440
Hideki Ohta, Tomohide Takeyama, Yoshimasa Takeyama, Motohiro Inagaki, Tomihisa Mizuta, Masashi Nabetani, and Yukihiro Nishida

Lessons Learnt from a Catastrophic Failure of Terr Armée Wall Due to Heavy Rainfall.............................................................................................................. 454
Satoru Shibuya and Takayuki Kawaguchi

**Mechanics of Unsaturated Soils**

Computation of Number of Equivalent Strain Cycles: A Theoretical Framework ...... 471
Russell A. Green and Jongwon Lee

Unsaturated Shear Strength Behavior of a Fine Sand ................................................. 488
Ning Lu and Bailin Wu

The Dynamics of Sediment Gravity Flows Following Fluidization ............................ 500
Amiruddin, Hideo Sekiguchi, and Shinji Sassa

A Comprehensive Approach to Modeling the Behavior of Unsaturated Soils Using an Elastoplastic Framework ................................................................. 515
Kanthasamy K. Muraleetharan, Changfu Wei, and Chunyang Liu

**Microstructure of Soils**

Soil-Structure Interface Shear Transfer Behavior ..................................................... 528
Tuncer B. Edil, Peter J. Bosscher, and Aaron J. Sundberg

Characterization of X-Ray CT Data to Assessment of Geomaterials ..................... 544
Jun Otani and Toshifumi Mukunoki

A Micro-Mechanical Study of Soil Liquefaction and Soil-Pile Interaction during Dynamic Excitations ................................................................................................. 554
M. Zeghal and U. El Shamy
Geomechanics II

Appendices

A. Participant List and Contact Information ................................................................. 567
B. Technical Discussions during Sessions ................................................................. 575
